

Case History

YUASA gets a facelift

Rainbow International Swindon were asked to tender for a major commercial project at the Yuasa Batteries UK headquarters recently.

The 90,000m² UK distribution headquarters were in need of a complete external clean down to remove years of dirt, debris and verdigris on all elevations of the building up to 16m high.

The site is in operation 24/7, so there were logistical considerations to complete to ensure all the works required were carried out without causing disruption to 'business as usual' for the company.

With multiple car parks and articulated vehicles and forklifts constantly on the move it was critical for Rainbow to oversee all Health & Safety requirements. Making sure these were meticulously adhered to, as this was a challenging project.

Following multiple site visits after confirmation of the tender, a full RAMS document was generated to cover all aspects of the project in fitting with the sites working practices. The technicians too advantage of the 'quieter' operational hours on evenings, and at weekends to complete this work.

Key Facts

Market

- Commercial premises

Service

- Mould Remediation
- Jet washing
- Media Blasting

Location

- Swindon
